

YUSSUF AKRAM IBRAHIM

Cybersecurity Student | CSIT

Alexandria, Egypt 21523 • 01001092754 • yussufakram189@gmail.com

PROFESSIONAL SUMMARY

Motivated Computer Science & Information Technology student at Egypt-Japan University of Science and Technology specializing in Cybersecurity. Proficient in Python, C++, and MySQL, with hands-on experience developing a file encryption/decryption application and embedded systems solutions. Demonstrates strong problem-solving, teamwork, and leadership skills through academic and technical projects. Passionate about cybersecurity and eager to apply technical knowledge in a real-world internship environment.

EDUCATION

Bachelor of Science: Computer Networks & Cybersecurity, Expected in 06/2028
Egypt Japan University of Science And Technology - New Borg El Arab

COURSE EXPERIENCE

Project: Student Management System | *Advanced Programming* | *Technologies: Python, MySQL*

- Co-developed a comprehensive, database-driven application within a 5-member team to efficiently track, update, and manage student records.
- Designed and optimized relational database schemas in MySQL to ensure data integrity and fast retrieval times.
- Programmed the backend architecture in Python to execute CRUD (Create, Read, Update, Delete) operations and handle secure user input validation.

Project: Cryptographic File Encryption Utility | *Operating Systems* | *Technologies: Python, AES & RSA Cryptography*

- Collaborated in a 5-member development team to engineer a secure desktop utility capable of encrypting and decrypting local system files.
- Integrated specialized Python cryptography libraries to implement hybrid encryption, utilizing AES for rapid data block encryption and RSA for secure key management.
- Applied low-level operating system principles to manage file permissions, ensuring secure read/write memory handling during the encryption process.

Project: Smart Safe Hardware Retrofit | *Embedded Systems & Hardware* | *Technologies: C++ (Arduino), RC522 RFID, MPU6050 Sensor*

- Retrofitted a standard physical safe into a modernized, smart-security system powered by an Arduino Uno microcontroller.
- Engineered a contactless access control system by integrating an RC522 RFID module for secure user authentication to replace traditional locking mechanisms.
- Programmed real-time tamper detection utilizing an MPU6050 accelerometer and gyroscope to monitor for unauthorized movement, tilting, or forced physical entry.

SKILLS

Languages: Python, C++ (Arduino), SQL

Security & Concepts: Cryptography (AES/RSA), Object-Oriented Programming (OOP), Relational Databases

Tools & Environments: Linux CLI, MySQL, Git

LANGUAGES

English — Full Professional

Arabic — Native or Bilingual

Japanese — Elementary
